EXPERIENCE

Vibrant   **California, USA**
Senior Fullstack Engineer   *Mar 2025 - Mar 2026*

- Led the evolution of the scheduling system within the Vibrant app, transitioning to practice-wide appointment types, integrating Cal.com busy-time syncing, enabling multi-provider daily views, and introducing physical room scheduling to support in-person care alongside virtual visits.
- Implemented Fullscript integration for supplement plan creation and tracking, enabling clinicians to prescribe, manage, and sync supplement data directly into Medplum-powered patient records for end-to-end care continuity.
- Built real-time in-person AI scribing powered by Deepgram, streaming visit transcription in fault-tolerant chunks and processing encounters via background jobs to automatically generate structured SOAP notes within the platform.
- Redesigned and expanded the clinical communication and records experience, refactoring the messaging UI, enabling clinician-only internal notes, dynamic care team chat management, optimistic messaging, and launching a unified Records tab consolidating AI scribes, labs, imaging, and questionnaires.
- Contributed to scaling the platform from 6 to 65 practices within one year, supporting rapid product stabilization and feature expansion during a growth phase that culminated in a $9M fundraise.

Binti   **California, USA**
Senior Frontend Engineer   *Oct 2024 - Dec 2024*

- Led the development of a high-stakes React demo for a Washington state contract worth eight figures, building critical features like the Intake Screening Tool with decision tree logic and Person Profile pages while maintaining a rapid delivery pace.
- Engineered reusable layouts and components that accelerated project velocity, documented them in Storybook, and developed full-stack features using Ruby on Rails back-end integration with React front end.
- Created innovative features, including a Reporter Portal demo and image annotation prototype, and consistently received positive feedback from managers while working under tight deadlines.

Saagas.ai   **Seattle, USA**
Fullstack Engineer   *Dec 2023 - May 2024*

- Developed the MVP app and landing page for a new product launch, utilizing Next.js with Typescript for the landing page and React with Typescript and TailwindCSS for the app.
- Implemented lambda functions with Python and FastAPI in the backend to optimize app performance.
- Created detailed documentation of all development decisions made throughout the project, ensuring seamless onboarding for new team members

Tinloof   **Berlin, Germany**
Senior Frontend Engineer   *Sep 2023 - Nov 2023*

- Led the creation of SoleRetriever's new blog MVP utilizing Next.js and Sanity, which enhanced website performance and offered content writers a more intuitive interface for streamlined content creation. A custom component was designed within Sanity to simplify the selection of sneakers from their Supabase database, allowing for the effective presentation of sneaker information on the blog.
- Successfully migrated SoleRetriever's Webflow blog to Sanity by creating custom scripts to scrap each article, resulting in a more efficient content structure within Sanity and saving the client a significant amount of money that was previously allocated to Webflow.
- Developed and implemented a responsive website for Ambassador.io using Remix and Tinloof's builder, improving user experience.

Belk   **Charlotte, USA**
Frontend Engineer   *Jun 2022 - Sep 2023*

- Fixed bugs and maintained the CSS, HTML, and Javascript of belk.com, impacting millions of users and always having accesibility and performance in mind.
- Reduced server side render time almost to half of the time by converting isml files of salesforce commerce cloud into javascript files.
- Added new components to their design system using Vue.js and web components, working closely with the design team and co-workers to deliver the best components with a great API.

Tonic 3   **Dallas, USA**

React.js Developer   *Jul 2021 - Jun 2022*

- Developed a dashboard app for Avery Dennison, utilizing React.js, Material UI, and Typescript to create an intuitive user interface that received overwhelmingly positive feedback from clients.
- Implemented numerous features including charts using Victory Chart, maps with Mapbox, pagination, tables with filtering options and more - improving ease-of-use and functionality for users.
- Collaborated closely with the Product Owner and design team to develop story points and assign tickets - ultimately delivering a high-quality product ahead of schedule.

TEIXIDO S.A.   **Asunción, Paraguay**

React.js & UI Developer   *Mar 2020 - Jul 2021*

- Maintained the design system of a renowned newspaper web page using SASS (ITCSS architecture with BEM class naming) and implemented small React components to improve web performance with lazy loading patterns
- Optimized another newspaper web page through lazy loading of React components, reducing initial load time and improving download size, resulting in improved user experience and increased site traffic.
